But short of the defrag that Ive already done, Im not sure what to do I could cull a bunch of programs and reduce the space Im using, but Im already using far less than the Total size after shrink.. After trying above it still failed, so I just shrunk the disk in three smaller increments to reach the size I wanted.
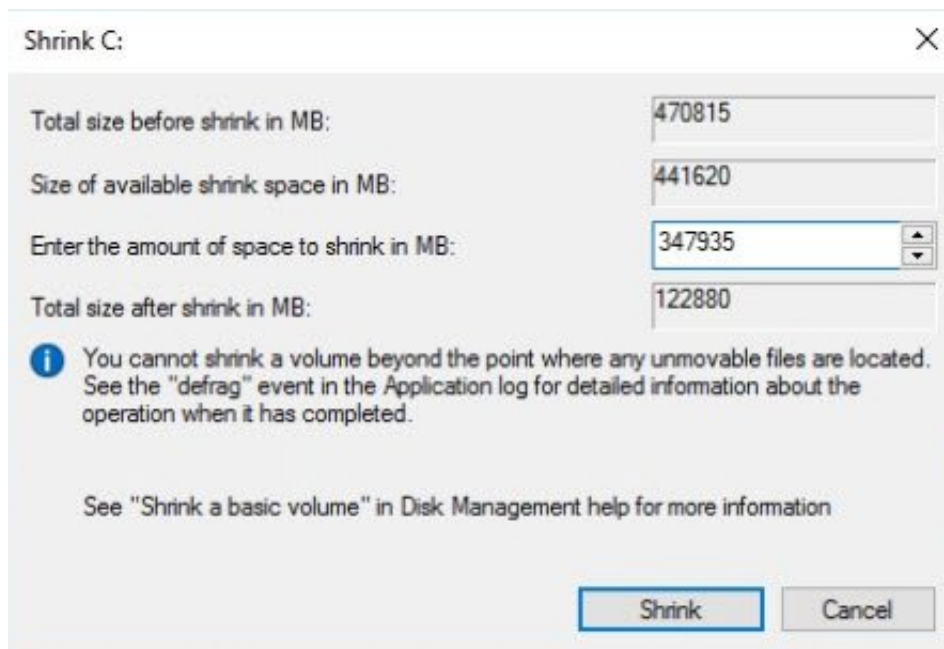

1. move unmovable files
2. move unmovable files windows 7
3. move unmovable files defragment

Finally, I had to delete all of my restore points before I could shrink the disk.. The first time I tried to resize it the minimum size was around 425GB Optimize-Volume -DriveLetter C -ReTrim -Defrag -SlabConsolidate -TierOptimize -NormalPriority.. For instance, I could not delete the pagefile using the above command Also, the K option for defrag was not available on my computer, so I just excluded that flag.
